VIANU

DATA PROTECTION CONCEPT FOR THE PILOT WITH VIANU

Appendix 1 to the works agreement

How to use this

This concept describes which data is created in the pilot and how VIANU handles it. Fill in the passages in square brackets for your company.

1. Purpose and scope

The pilot checks whether custom-made insoles make a difference for up to 10 employees who take part. This concept describes which data is created for that, who processes it and when it is deleted.

2. Which data is created

- Photos of the feet and of the current insole in the shoe, taken with the participant's own smartphone during a break. Each foot capture needs 6 photos.
- The details needed to make the insole: the participant's name and the company logo for the engraving, plus the delivery location at the workplace.
- Four answers at the end of the pilot: wear rate, noticeable improvement, recommendation and appreciation. The participants answer them themselves.

3. Data flow

a) The participant takes the photos and releases them. Taking part is voluntary.
b) The photos go to VIANU and to the technology partner SELFWEAR AI. SELFWEAR AI measures the feet from the photos and models the insole from them as a digital model. The model goes to VIANU.
c) VIANU 3D-prints the insole locally in Germany, itself or with a manufacturing partner. Foot experts at VIANU check the analysis and quality throughout the process.
d) The insole reaches the person at the workplace, at the latest 7 days after the foot capture.
e) After production the photos are deleted.
f) At the end the employer receives an anonymized report at group level.

4. Roles and responsibility

The employer is responsible for running the pilot and for the list of participants. VIANU (SIGMA WORKS GmbH) processes the photos and the details for production on behalf of the employer. The basis is the data processing agreement (template available to download). SELFWEAR GmbH, Venloer Straße 440, 50825 Cologne, is engaged as a sub-processor of VIANU and is bound by a contract under Art. 28 GDPR.
The legal basis is the participants' voluntary consent (Art. 6(1)(a) GDPR, Section 26(2) BDSG). Anyone who does not take part has no disadvantages.

5. Processing location, storage period, access and deletion

Processing location: The photos are processed in the EU. The insole is 3D-printed locally in Germany.
Use: The photos are used only to make the insole. VIANU, its manufacturing partners and SELFWEAR AI

can see them. The employer receives no photos.
Deletion: The photos are deleted after production. SELFWEAR AI runs a learning system. What has flowed into the learning system of SELFWEAR AI no longer allows conclusions about individual persons.
Survey answers: The individual answers are used only for the report and are deleted after the report is handed over. [Different period, if agreed.]
Access: Participants can ask VIANU for information about their data at any time. VIANU replies within one month.
What the employer learns: The employer knows the list of participants. The report is anonymous at group level. The employer receives no individual answers and no photos.

6. Rights of the data subjects

Participants have the right of access (Art. 15 GDPR), rectification (Art. 16), erasure (Art. 17), restriction of processing (Art. 18), objection (Art. 21) and the right to lodge a complaint with a data protection supervisory authority (Art. 77). They can withdraw consent at any time with effect for the future (Art. 7(3)). Requests go to the contact in section 8.

7. Technical and organizational measures

- Only the people who make the insole have access to photos and production details.
- The employer has no access to photos.
- Data security with SELFWEAR AI is agreed by contract on the principles of confidentiality, integrity and availability.
- Photos are deleted after production (section 5).
- The report contains no details about individual persons.

8. Contact

Roderich Körner-Rehn, Managing Director, VIANU, a brand of SIGMA WORKS GmbH, Grabenstrasse 5, 40878 Ratingen, Germany. Email info@vianu247.com, phone +49 15678 548855.
